More Graphs with full Phonol. Score Scale

Here, phonological score and L1 digit span do not have the exact same scale, since the maximum for L1 digit span is 208. The correlations are plotted here with the full phonological score scale, because in the presentation (for visibility mostly), the phonological score started from 50% to 100%. That might have been visually quite misleading in terms of the correlation, and here, as we can see, no-one is below the blue diagonal line (meaning that no-one has an average L1 digit span and a low phonological score, for instance).
